Smart BNCT Planning: When Artificial Intelligence Meets Radiobiology

PhD Project by Cristina Pezzi

State of Art : Boron Neutron Capture Therapy (BNCT)

Smart BNCT Planning: When Artificial Intelligence Meets Radiobiology

PhD Project by Cristina Pezzi

State of Art : Boron Neutron Capture Therapy (BNCT)

✓ Boron-10 atoms

Smart BNCT Planning: When Artificial Intelligence Meets Radiobiology

PhD Project by Cristina Pezzi

State of Art : Boron Neutron Capture Therapy (BNCT)

- ✓ Boron-10 atoms
- ✓ Thermal neutron beam

Smart BNCT Planning: When Artificial Intelligence Meets Radiobiology

PhD Project by Cristina Pezzi

State of Art : Boron Neutron Capture Therapy (BNCT)

Dosimetric Models

✓ ***RBE-weighted Dose Model***

$$D_w = CBE \cdot D_B + RBE_{th} \cdot D_{th} + RBE_f \cdot D_f + RBE_{\gamma} \cdot D_{\gamma}$$

$$RBE_X = \frac{D_R}{D_X}$$

Smart BNCT Planning: When Artificial Intelligence Meets Radiobiology

PhD Project by Cristina Pezzi

State of Art : Boron Neutron Capture Therapy (BNCT)

Dosimetric Models

✓ **Photon Isoeffective Dose Model**

$$D_R(D_1, ..., D_4) = \frac{1}{2} \frac{\left(\frac{\alpha}{\beta}\right)_R}{G_R} \times \left(\sqrt{1 + \frac{4G_R}{\alpha_R \left(\frac{\alpha}{\beta}\right)_R} \left(\sum_{i=1}^4 \alpha_i D_i + \sum_{i=1}^4 \sum_{j=1}^4 G_{ij}(\theta) \sqrt{\beta_i \beta_j} D_i D_j \right)} - 1 \right)$$

The survival dose-response relationship is described by **linear quadratic model** that accounts for dose-rate dependent **sublesion repair**

Radiation synergism, the survival dose-response is modulated by Lea-Catcheside factors G for simultaneous mixed irradiation

Smart BNCT Planning: When Artificial Intelligence Meets Radiobiology

PhD Project by Cristina Pezzi

State of Art : Boron Neutron Capture Therapy (BNCT)

Dosimetric Models

✓ *Photon Isoeffective Dose Model*

$$D_R(D_1, \dots, D_4) = \frac{1}{2} \frac{\left(\frac{\alpha}{\beta}\right)_R}{G_R} \times \left(\sqrt{1 + \frac{4G_R}{\alpha_R \left(\frac{\alpha}{\beta}\right)_R} \left(\sum_{i=1}^4 \alpha_i D_i + \sum_{i=1}^4 \sum_{j=1}^4 G_{ij}(\theta) \sqrt{\beta_i \beta_j} D_i D_j \right)} - 1 \right)$$

2D CELL CULTURE

How can we apply it in clinic ?

State of Art : Treatment Planning System (TPS)

What is the State of Art of TPS ?

Smart BNCT Planning: When Artificial Intelligence Meets Radiobiology

PhD Project by Cristina Pezzi

State of Art : Treatment Planning System (TPS)

MacNCTPlan (1990, MIT – USA)

Smart BNCT Planning: When Artificial Intelligence Meets Radiobiology

PhD Project by Cristina Pezzi

State of Art : Treatment Planning System (TPS)

MacNCTPlan (1990, MIT – USA)

Voxel size = 1 cm³

56 materials (mixture of air, bone, normal soft tissue, tumor soft tissue)

MCNP as Monte Carlo simulation code

Smart BNCT Planning: When Artificial Intelligence Meets Radiobiology

PhD Project by Cristina Pezzi

State of Art : Treatment Planning System (TPS)

MacNCTPlan (1990, MIT – USA)

Voxel size = 1 cm³

TOO BIG!

56 materials (mixture of air, bone,
normal soft tissue, tumor soft tissue)

BIG UNCERTAINTIES (calculation error above 20%)!

MCNP as Monte Carlo simulation code

LONG CALCULATION TIME!

Smart BNCT Planning: When Artificial Intelligence Meets Radiobiology

PhD Project by Cristina Pezzi

State of Art : Treatment Planning System (TPS)

NCTPlan (2002, Argentina + MIT)

Superimposition of dose contours on CT images

IMPROVEMENT OF DOSE VISUALIZATION
