

Applicazioni biomediche della Risonanza Magnetica e dei Materiali Magnetici

University researchers involved (NMR group, Dip. Fisica,
UNIPV, <http://arturo.unipv.it>) :

Seniors : *Borsa F., Carretta P., Corti M., [Lascialfari A.](#) (UNIMI), Sanna S., Moscardini M.
(Mariani M. - UNIBO, Rigamonti A.)
collaboration with Nano R. (Biology) and Prof.s Altieri, Vidari (Chemistry), Dionigi
(Medicine) groups*

PhD and postdoc students : *Bordonali L. , Filibian M., Orlando T., collaboration with
Paolini A., Pasi F.*

UNIMI personnel: *Orsini F., Arosio P.*

MAIN RESEARCH LINES

NOT EXHAUSTIVE

- *Applications of magnetic nanoparticles to biomedicine – DIAGNOSIS AND THERAPY*
- *Dynamic nuclear polarization – DIAGNOSIS (and THERAPY)*
- *Magneto therapy – THERAPY (just begun)*
- *Boron Neutron Capture Therapy – BNCT – THERAPY, see S. Bortolussi talk*

*Suggested book : Magnetism in Medicine, eds. W. Andrä and H. Nowak, Wiley-VCH
Thanks are due to Q. Pankhurst and C. Sangregorio for contributions to slides*

Laurea magistrale : courses directly involving NMR group

- Tecniche diagnostiche II (Carretta P., Lascialfari A.) : basics of NMR, MRI, Imaging
- Strumentazione fisica biosanitaria (Corti M.) : MRI, ultrasounds, viscosity, CA, MFH

Laurea triennale / laurea magistrale / PhD / postdoc / scuola specialità : Theses

Hospitals involved :

- **Pavia** : Policlinico S. Matteo, Ist. Neurologico "Mondino", Fondazione Maugeri
- **Milano** : Ospedale Niguarda, IEO, Ist. Mario Negri
- **contatti ulteriori** : Ist. Besta - Milano, Ist. Tumori - Milano, Policlinico - Milano

Companies :

Bracco SpA, Bruker Italia srl, Stelar srl

Students :

Laurea triennale : C. Cutaia, M. Mangiarotti, M. Mori, G. Savini, M. Montagna, A. Elia, T. Antonioli

Laurea magistrale : B. Comin, I. Zucca, M. Pasin, A. Vultaggio, M. Mangiarotti, F. Palesi, D. Panizza, F. Zucconi, A. Capozzi, T. Orlando, M. Alquati, L. Martignetti (UNITO), M. Nizzola (UNIMI)

PhD : F. Palesi, H. Amiri (UNIMI), K. Thangavel (UNIMI), L. Bordonali, T. Orlando

Postdoc : P. Arosio, M. Filibian, S. Velu, A. Gianella, A. Fiore, M. Marinone(...), M. Grandi (...), M. Mariani (...), F. Palesi, S. Pin, M. Bonora

Scuola specialità & companies : B. Comini, D. Panizza, F. Zucconi, F. Tedoldi, R. Melzi

Actual main collaborations

(magnetism, MRI, synthesis, hyperthermia)

- Dipartimento di Chimica, Università di Roma, gruppo prof. G. Ortaggi
- Dipartimento di Chimica, Università di Cagliari, Dr. M.F. Casula
- Dipartimento di Chimica, Università di Modena, gruppo prof. A. Cornia
- Dipartimento di Chimica, Università di Firenze, gruppo prof. D. Gatteschi
- Dipartimento di Chimica Fisica, Università di Pavia, gruppo prof. P. Ghigna
- Dipartimento di Chimica, Università di Pisa, Prof. E. Chiellini
- Dipartimento di Chimica, Università di Bologna, Prof. M. Comes Franchini
- Dipartimento di Chimica, Università degli studi di Milano, prof. P. Ferruti e E. Ranucci
- Dipartimento di Chimica, Università degli studi di Milano, prof. G. D'Alfonso
- Dipartimento di Scienze Chimiche, Università degli studi di Padova, Dr. V. Amendola

Projects open

- **FIRB** Riname – PI prof. D. Gatteschi (INSTM – FI)
- **Fondazione Cariplo** “Chemical synthesis and characterization of magneto-plasmonic nano-heterostructures” – PI Prof. P. Ghigna (INSTM-PV)
- **AIRC** “Magnetosomes as nanotechnology platform for thermotherapy of tumour”, PI A. Sbarbati (UNIVR)
- European project **NANOTHER**, PI Gaiker (Spain), **just ended**
- **INSTM – Regione Lombardia** MAGNANO, PI A. Lascialfari
- **Contract UNIPV – Bracco SpA** (DNP)

Experimental techniques at NMR group

Universita' degli studi di Pavia

- **MRI Esaote , Artoscan**, H= 0.2 Tesla
- **NMR : broadband spectrometers** (Bruker, Tecmag, Mid-Continent) covering a frequency range 4-400 MHz. Magnetic field 0-9 Tesla. Temperature : 0.3-1000 K.
- **Quantum Design SQUID magnetometer**. Temperature: 1.7-800K.
Magnetic Field : $-7 \div 7$ Tesla.
- **Adiabatic calorimeter**, $1.5 < T < 300$ K
- **"Wide-band" EPR**

Universita' degli studi di Milano

- **Atomic Force Microscopy** / Scanning Tunneling Microscopy / Magnetic Force Microscopy - Autoprobe CP Research System - Veeco. Working temperature range 0-60°C.
- **NMR : broadband spectrometer** Stellar Spinmaster. 5-70 MHz. Temperature : 4.2-350 K.
Magnetic field 0-1.4 Tesla.
- **NMR relaxometer**, $10 \text{ KHz} < f < 10 \text{ MHz}$. Temperature $150 < T < 350\text{K}$
(**MRI : Bruker AMX200**, 4.7 Tesla, super-wide-bore, rats and mice coils. Physiological parameters' control)

Available equipments : broad-band NMR, magnetometry and relaxometry

SMART Tracer
Frequency : 10KHz – 10MHz

FT-spectrometers and electromagnets

9 Tesla magnet for broad-band NMR

Esaote Artoscan 0.2 Tesla MRI Imager

SQUID magnetometer

Cryogenics

Clinical techniques related to our research

Magnetic Fluid Hyperthermia (MFH) or Magnetothermia TUMOUR THERAPY

- **Heating** through application of **AC magnetic field** via activation of 12 nm amino-silane coated Fe_3O_4 MNP directly implanted in the tumour (**glioblastoma**) mass at high doses (ca. 50 mg/cm^3)
- Typically : $\nu \sim 100 \text{ kHz}$, amplitude 10 kA/m
- Minor side effects
- Typical values of the reported **specific loss of power, SLP or SAR** (the energy converted into heat per mass unit) are : $10 \div 200 \text{ W/g}$
- Exceptions :
 - 35 nm bacterial magnetosomes (960 W/g at 410 kHz and 10 kA/m)
 - 16 nm $\gamma\text{-Fe}_2\text{O}_3$ NP (1650 W/g at 700 kHz and 24.8 kA/m , 300 W/g at 11 kA/m)

Clinical techniques related to our research

Magnetic Resonance Imaging (MRI) **DIAGNOSIS**

MRI Timeline

- 1937 MR phenomenon - Rabi
- 1946 MR phenomenon - Bloch & Purcell
- 1952 Nobel Prize - Bloch & Purcell
- 1950-70 NMR developed as analytical tool
- 1972 Computerized Tomography
- 1973 Backprojection MRI - Lauterbur
- 1975 Fourier Imaging - Ernst
- 1977 Echo-planar imaging - Mansfield
- 1980 FT MRI demonstrated - Edelstein
- 1986 Gradient Echo Imaging - NMR Microscope
- 1987 MR Angiography - Dumoulin
- 1991 Nobel Prize - Ernst
- 1992 Functional MRI
- 1994 Hyperpolarized ^{129}Xe Imaging
- 2003 Nobel Prize - Lauterbur & Mansfield

Typical MRI apparatus for
clinical use, magnetic field
 $H = 1.5$ Tesla

Why MRI?

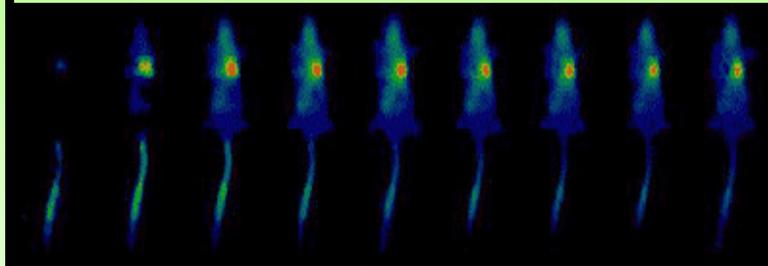

Nuclear Medicine:

- Poor spatial resolution
- Poor temporal resolution
- High sensitivity
- Reporters: radionuclides

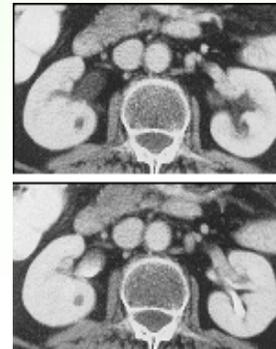

Optical Imaging:

- Poor spatial resolution
- Poor temporal resolution
- high sensitivity
- Reporters: luminescent probes

X-Ray (CT):

- Good spatial resolution
- Good temporal resolution
- Low sensitivity

MRI:

- **Non-invasive**
- Good spatial resolution
- Good temporal resolution
- Low sensitivity

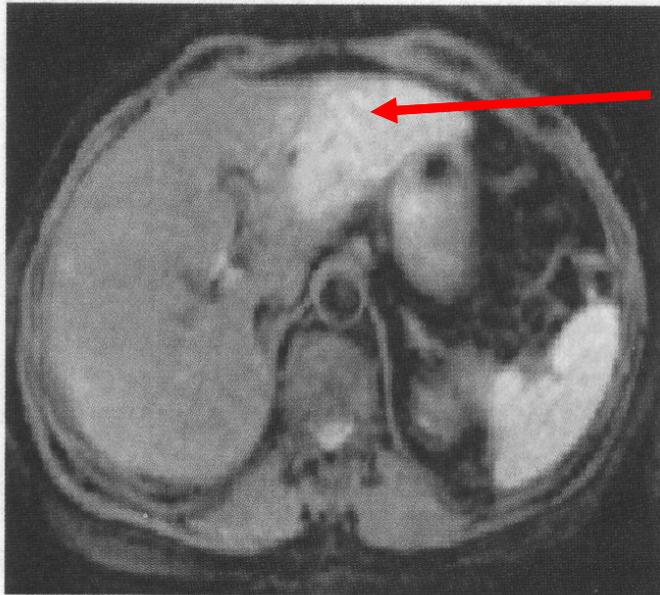

Why MRI contrast agents ?

Liver tumour detection by “negative” SP-CA

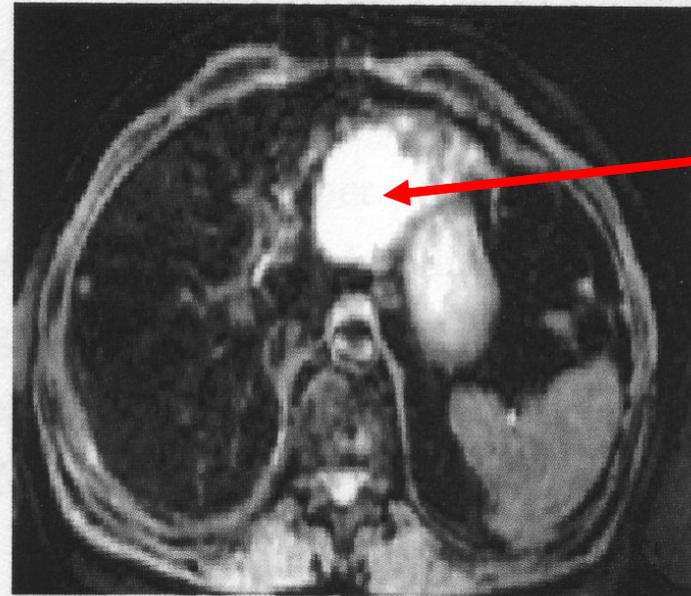

- Generally the negative CA are based on superparamagnetic nanoparticles

Example : liver tumour

(a)

without CA

(b)

with CA

Research interest in magnetic materials : different mechanisms

Sensing

(MRI, Sentimag, MEG-SQUID,...)

Moving
(navigation)

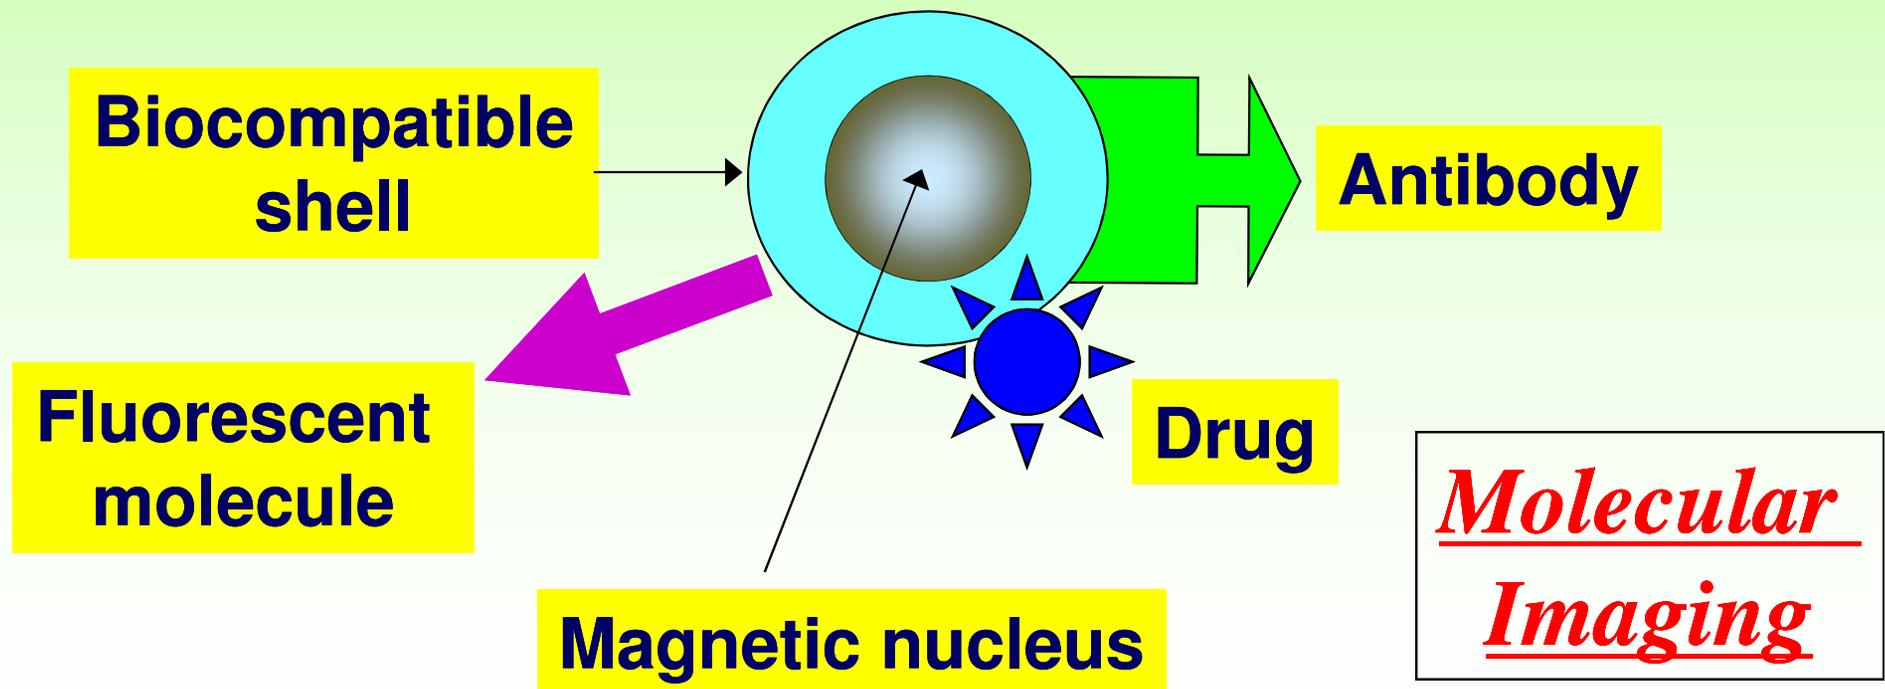

Heating
(Magnetic
Hyperthermia)

Ideal magnetic nanoparticle

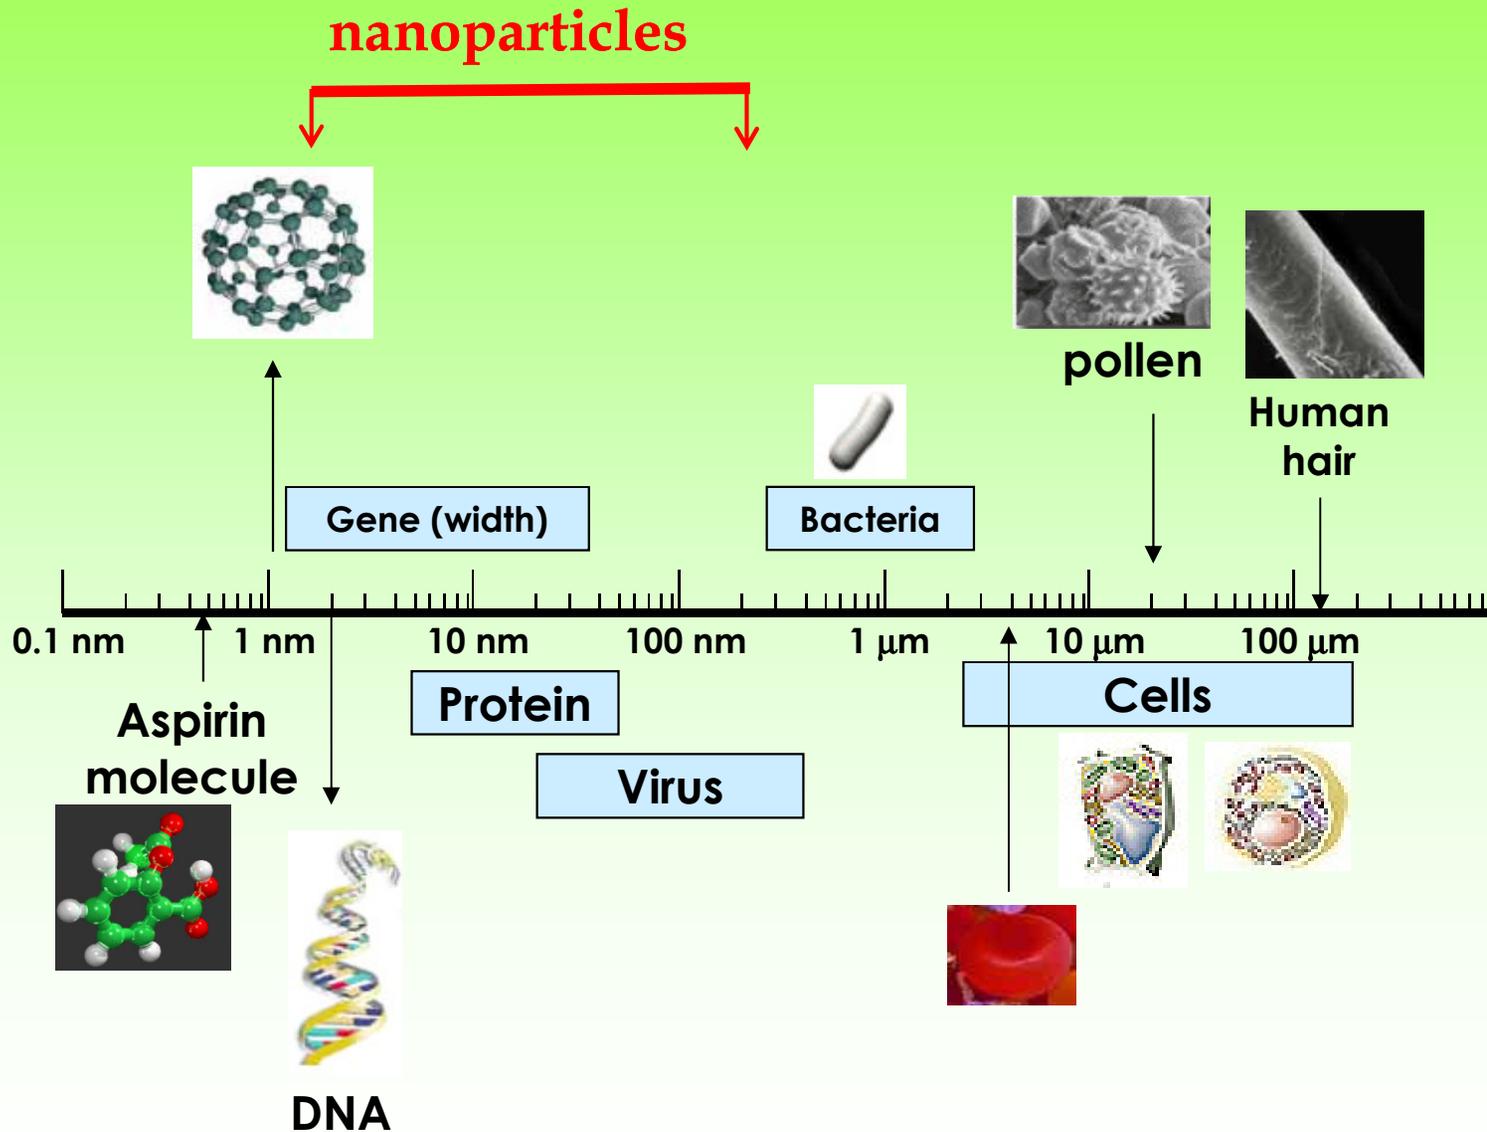

Magnetic Nanoparticles in Theranostics:

Diagnostics : **MRI**, sensing, fluorescence
Therapy : **magnetothermia, drug delivery**

Typical dimensions in nanomedicine

MNPs targeting (in vivo) & uptake

After MRI contrast agents injection

NP- Pisa- folic acid (Gradient-echo)

NP- Pisa- without folic acid (Gradient-echo)

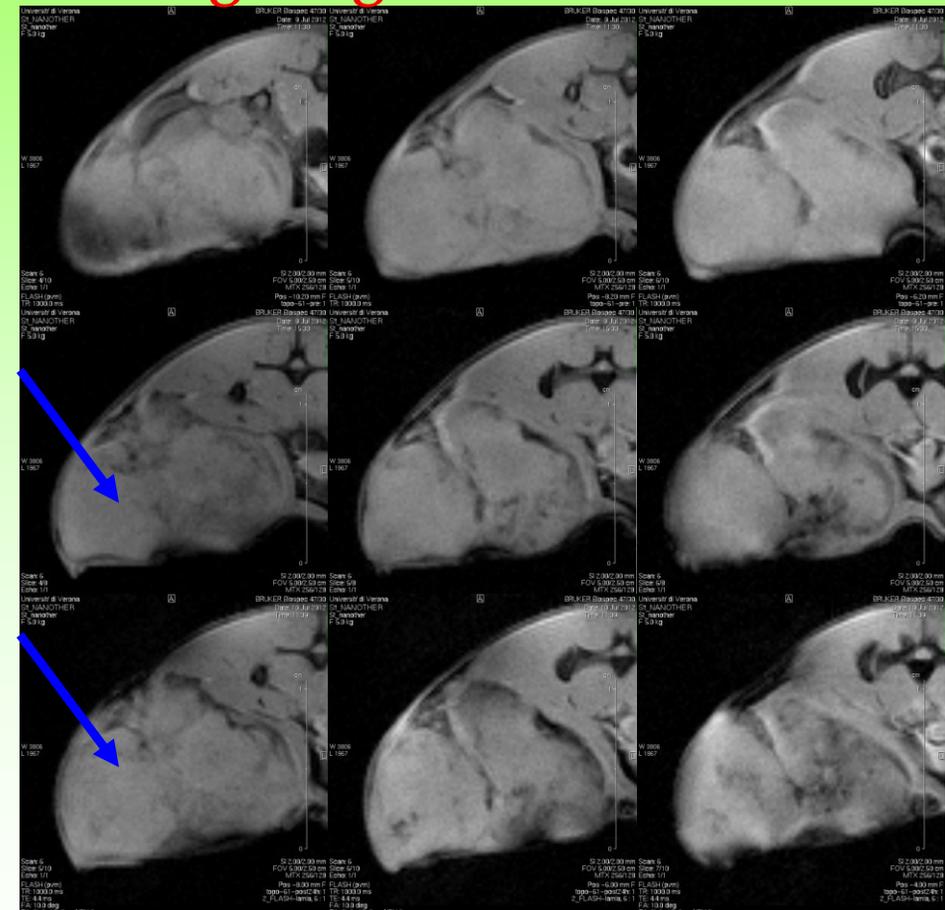

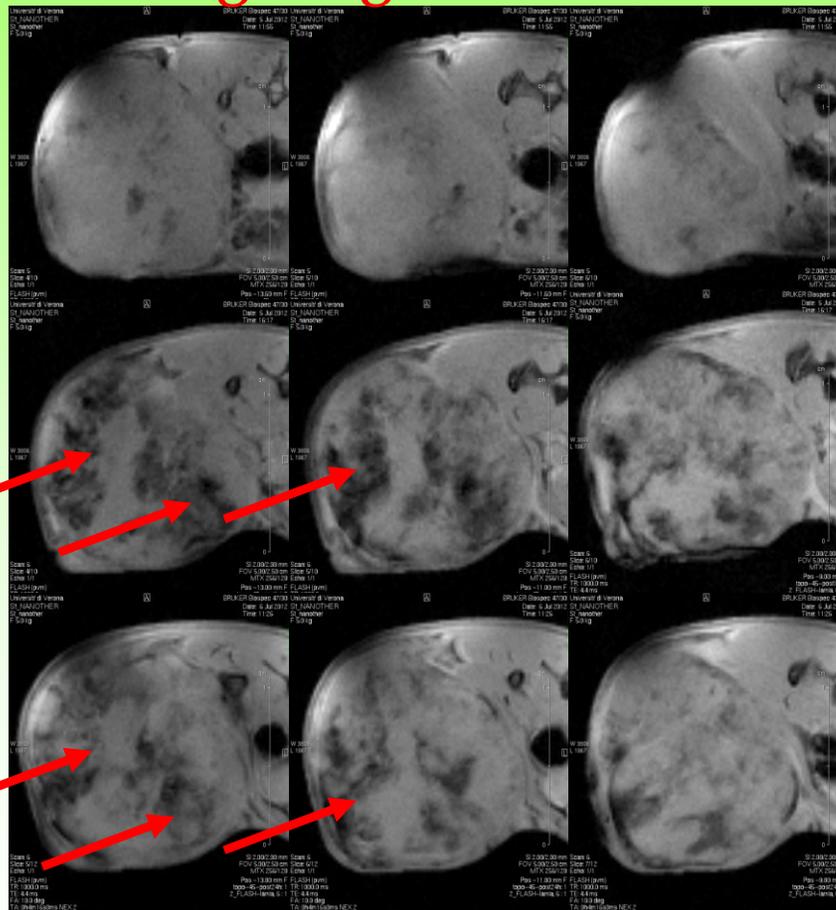

Targeting effective

Targeting NOT effective

PRE

POST

POST 24 H

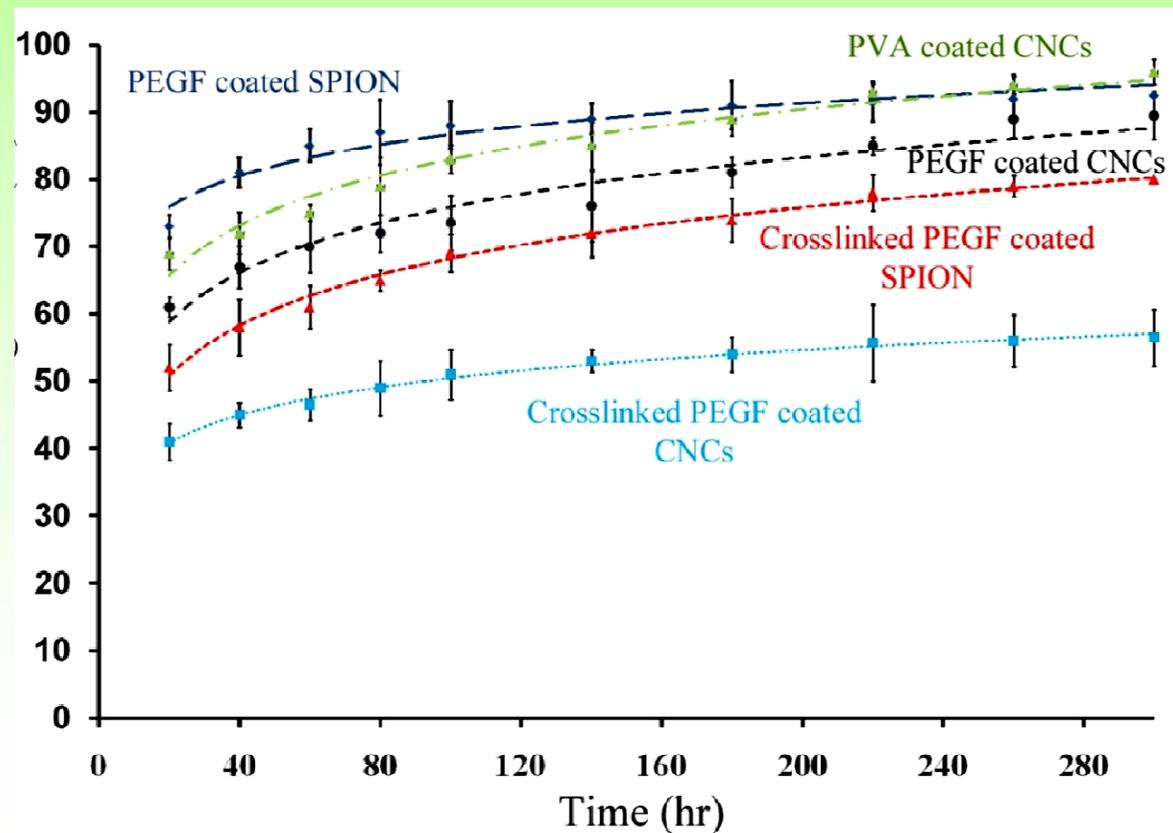

- MRI images of animal model with breast tumour
- Uptake studies in progress (R. Nano)

Therapy by **novel** MNPs : drug release

Percentage release of Tamoxifen
over 12 days (in vitro)

Sharif University
of Technology.

Examples of biosensors

First Biosensor! → *Coal miners' biosensor*

Commercial Biosensors

Glucose biosensor

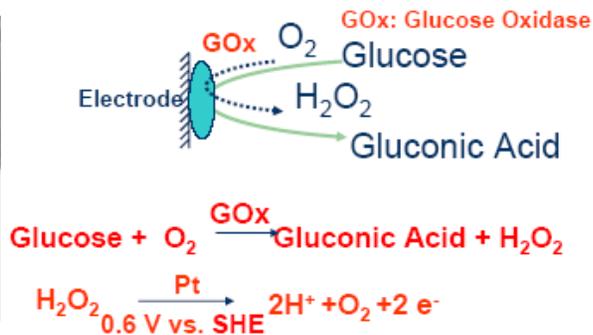

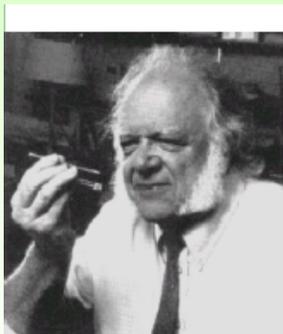

By Johnson & Johnson

Pregnancy test

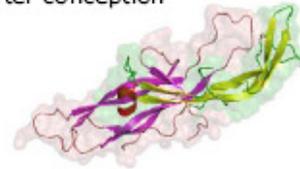

By Gima

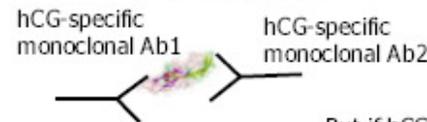

The first and the most widely used commercial biosensor: the blood glucose biosensor – developed by *Leland C. Clark* in 1962

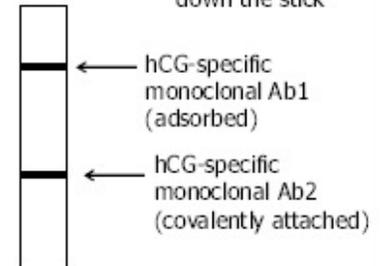

hCG is a 244 amino acid glycoprotein (MW ~37kDa) produced by the embryo soon after conception

Sandwich assay:

Urine sample
← carries Ab1 down the stick

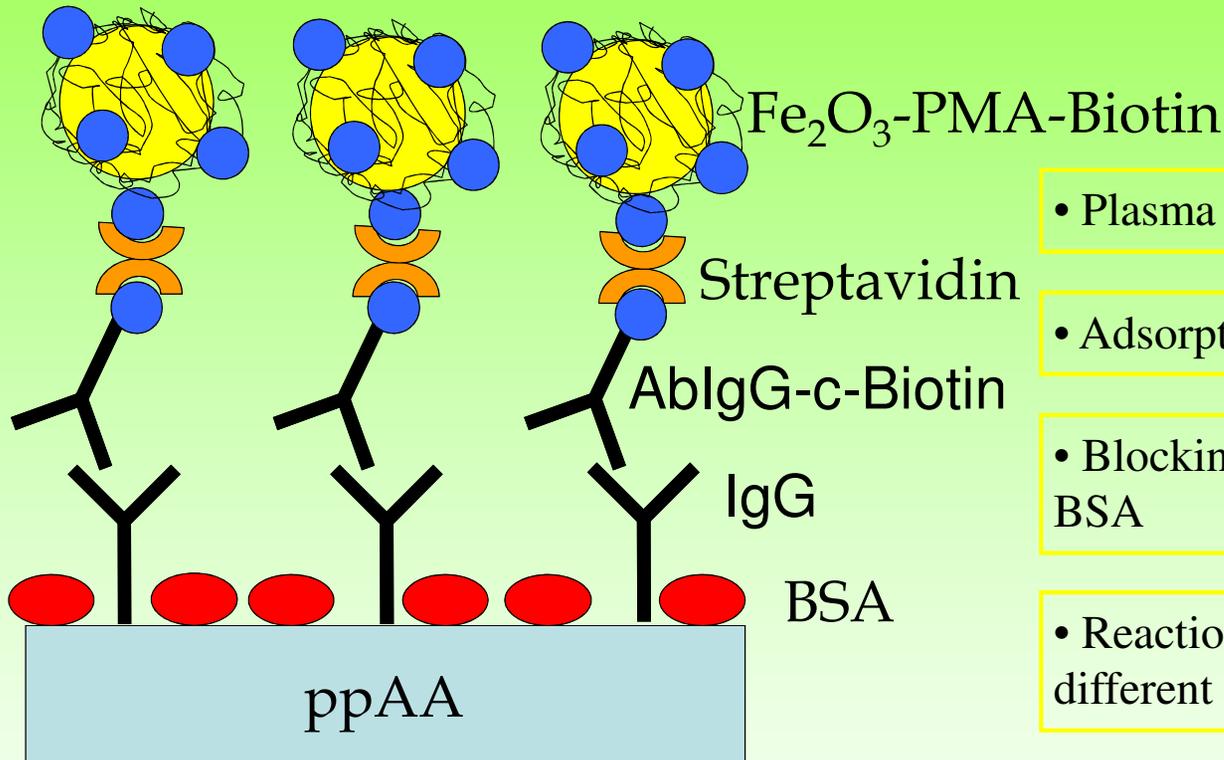

If Ab1-hCG complex present in the urine (pregnant), it will get stuck just where Ab2 is located

But if hCG is not present (not pregnant), hCG-specific monoclonal Ab1 will go straight through

Solid magnetic biosensors

Surface modification approach

- Plasma Deposited Poly Acrylic Acid (ppAA) [*]

- Adsorption of human IgG

- Blocking of the unreacted surface groups by BSA

- Reaction with biotinylated Ab-IgG molecules at different concentrations

- Absorption of streptavidin

- Absorption of *biotinylated modified γ -Fe₂O₃ superparamagnetic nanoparticles*

[*] F. Bretagnol, A. Valsesia, G. Ceccone, P. Colpo, D. Gilliland, L. Ceriotti, M. Hasiwa, and F. Rossi *Plasma Processes and Polymers* 3, 443 (2006).

Solid magnetic biosensors

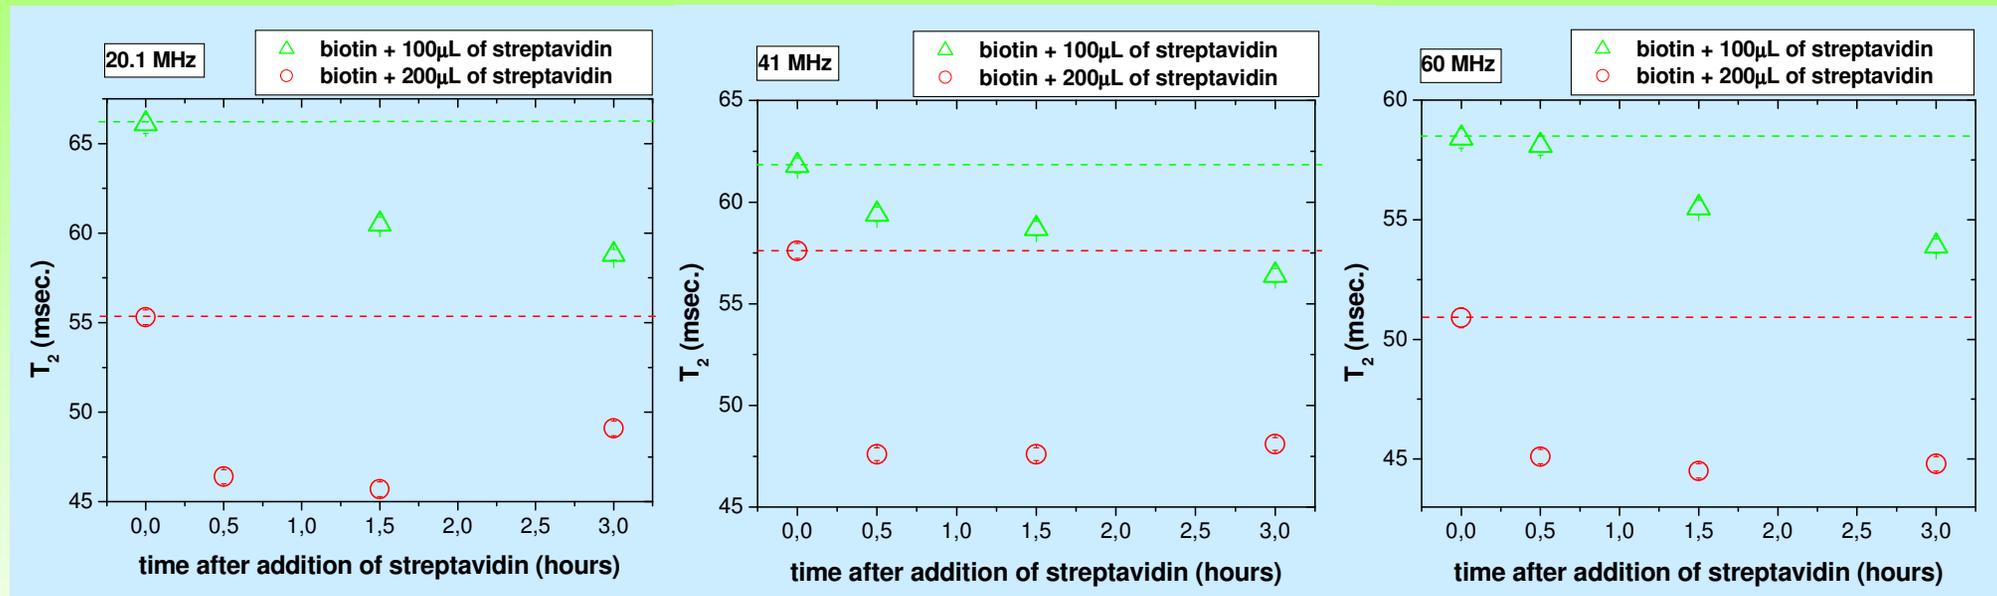

Results of the approach

^1H -NMR measurements

* Room temperature

* ^1H -NMR relaxation times T_1 and T_2 evaluated at 20.1, 41 and 60 MHz

as a function of time after the addition of streptavidin and quantity of streptavidin ($[\text{Strept}] = 1 \text{ mg/mL}$)

The longitudinal relaxation time T_1 not reported \Rightarrow under study

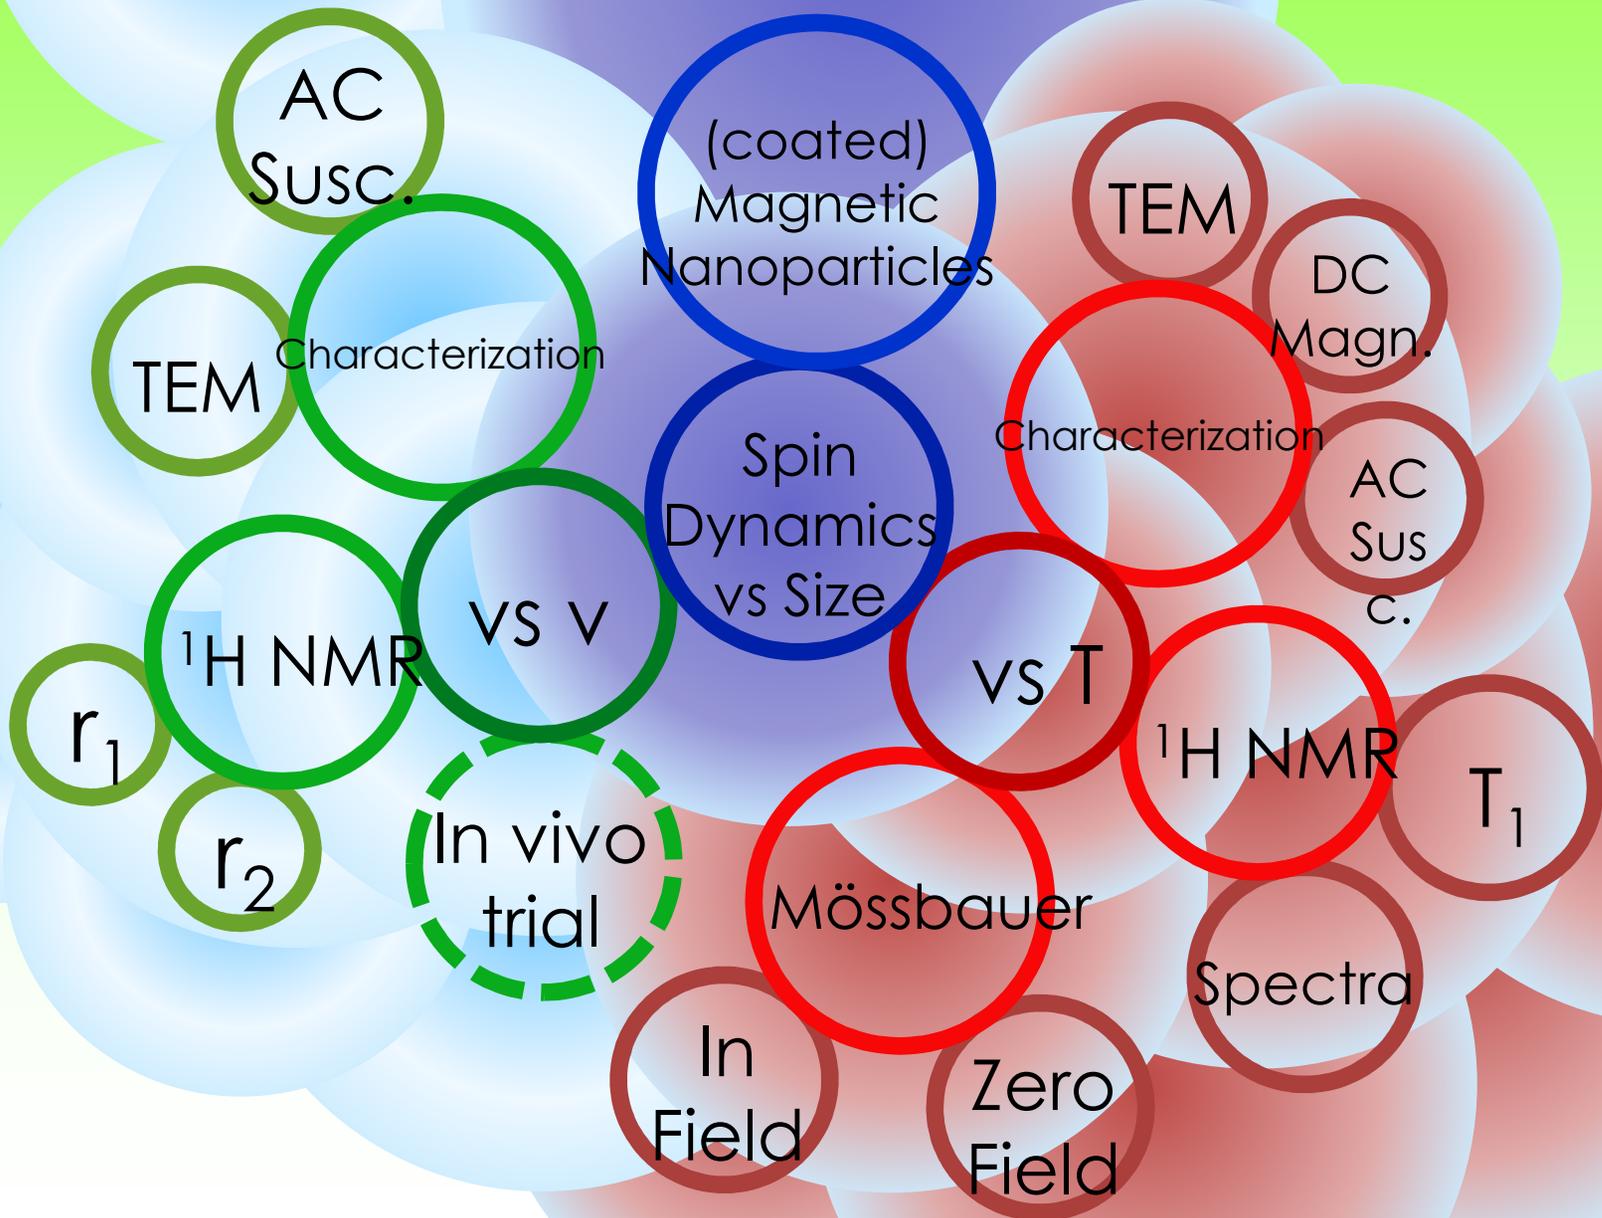

A 10-15% change of the transverse relaxation time $T_2 \Rightarrow$ Sensitivity of NMR

! Detection of probe-analyte interaction ! ... Clusters !

! Analyte not modified !

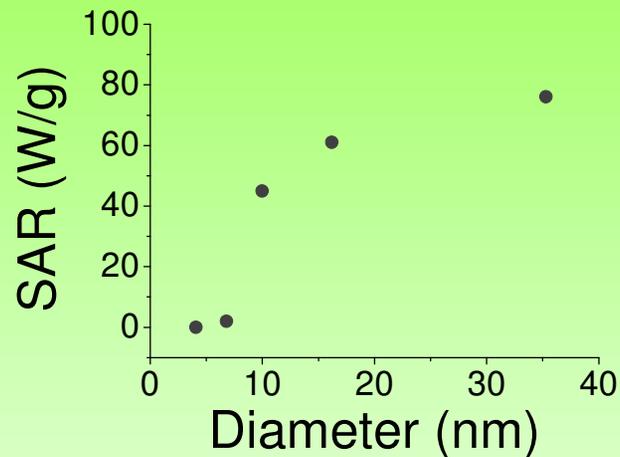

MNPs : from fundamental properties to applications

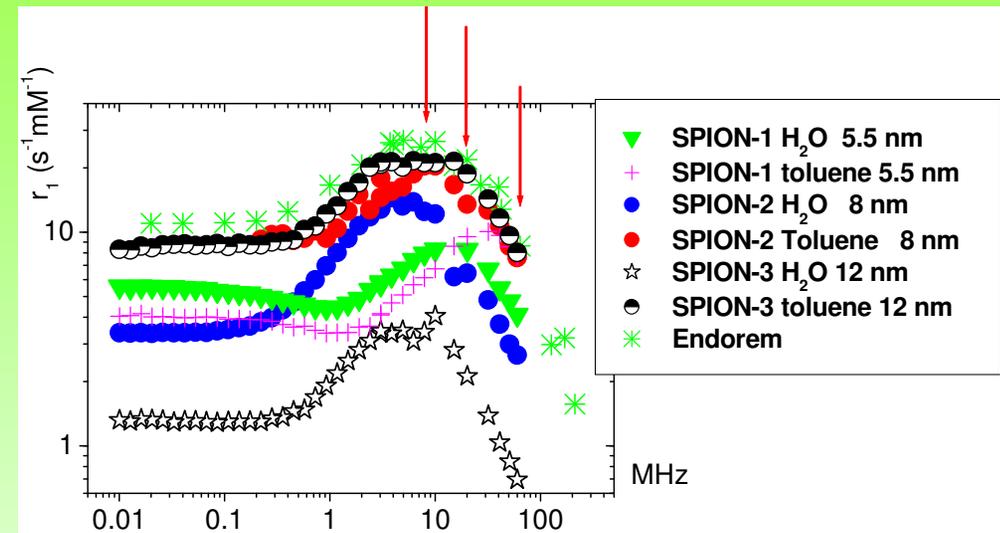

MNPs : from basic properties to applications

SAR in Magnetic Fluid Hyperthermia : Study of influence of microscopic features

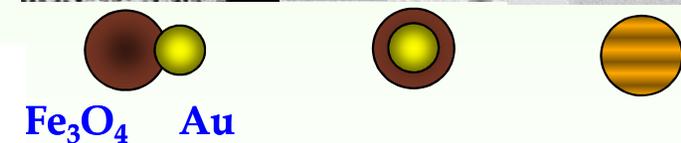

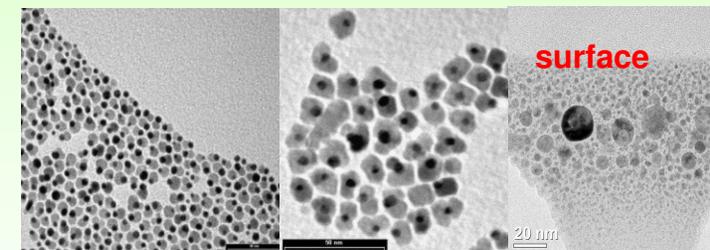

NMR relaxometry at room temperature

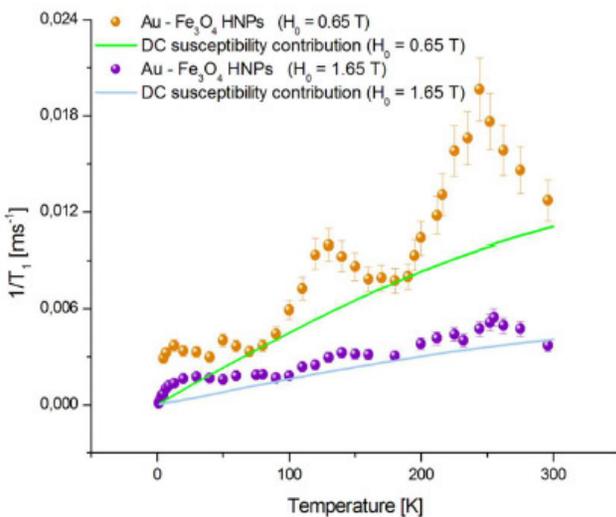

Magneto-optical nano-devices : ferrites+gold plasmon resonance and spin dynamics

Magneto-plasmonics

Physical model for spin dynamics :

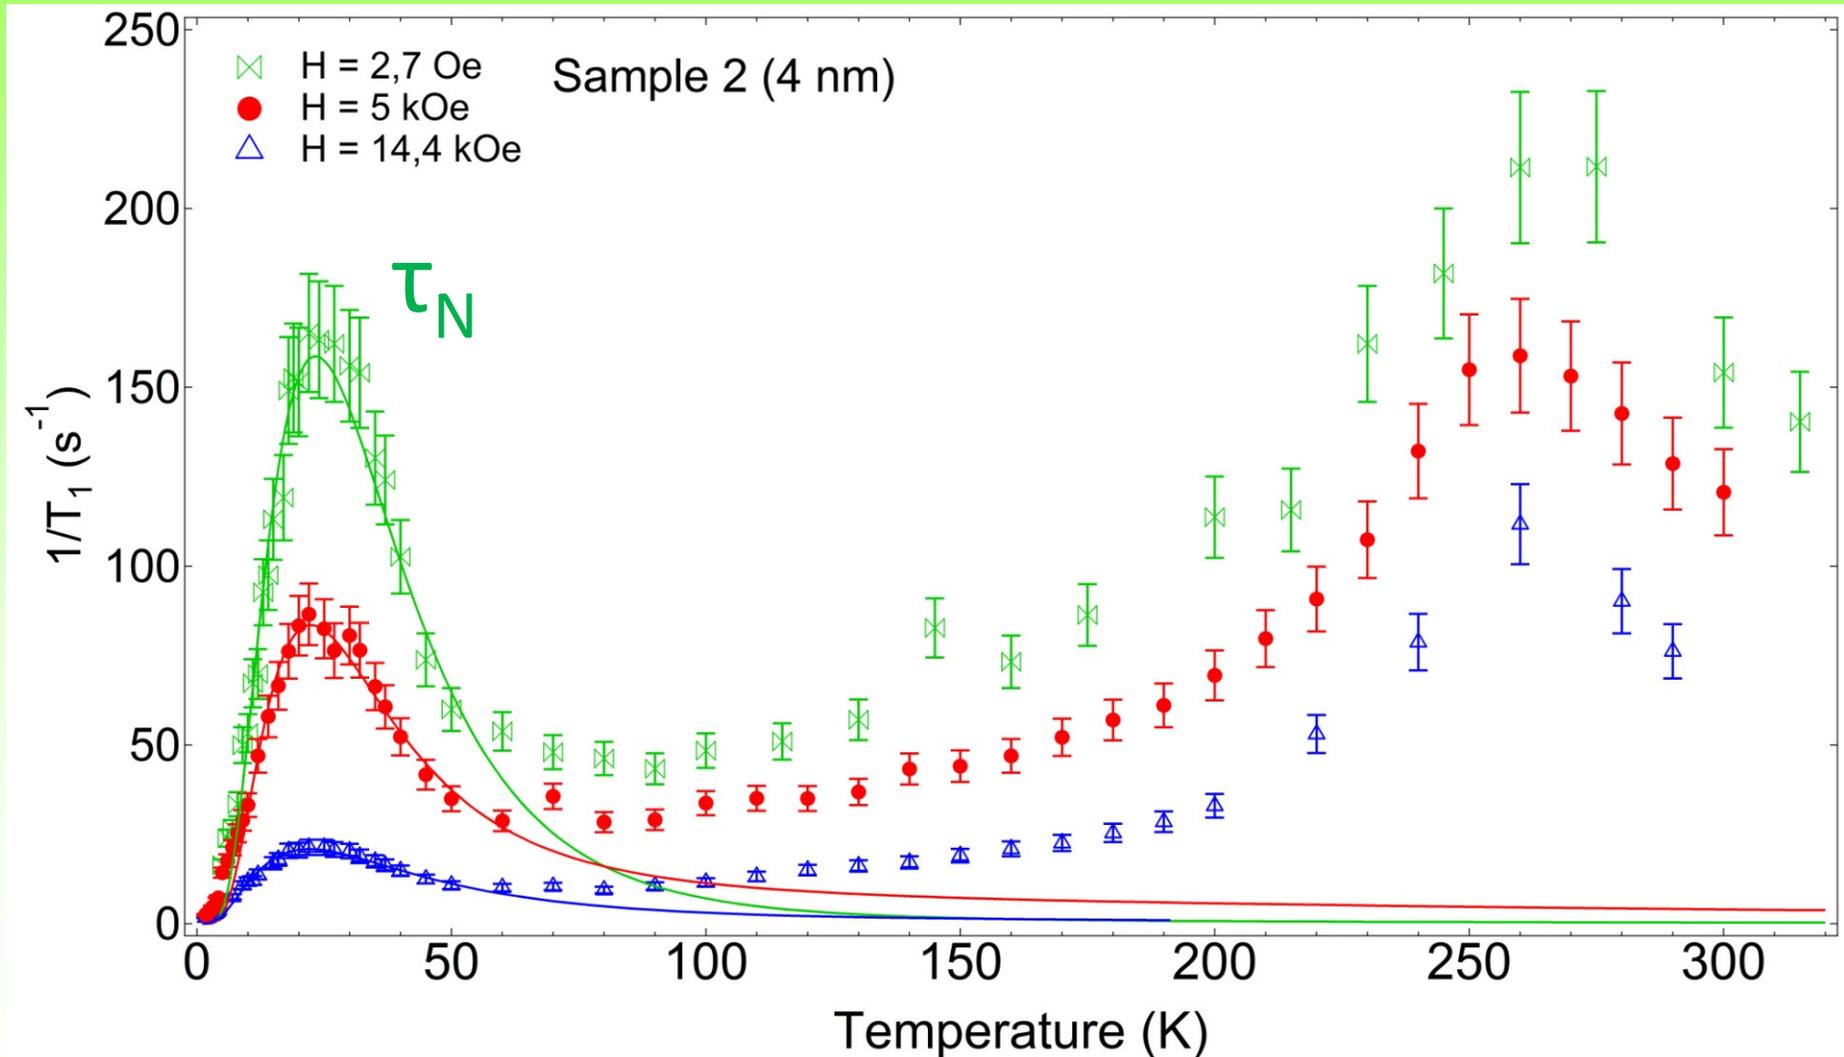

$$\frac{1}{T_1} = A\chi T \left(\frac{\tau_R}{1 + \omega_L^2 \tau_R} + \frac{\tau_N}{1 + \omega_L^2 \tau_N} + \frac{\tau_\gamma}{1 + \omega_L^2 \tau_\gamma} \right)$$

MNPs : fundamental magnetic properties

NMR vs temperature : disclosing spin dynamics & fundamental magnetism

Dynamic Nuclear Polarization : a novel contrasting technique and its principles

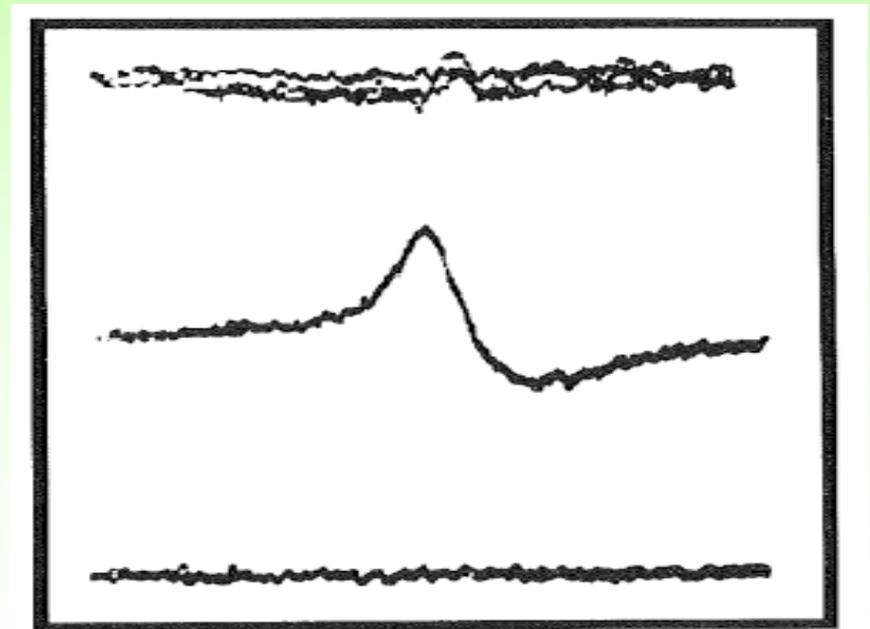

- ✘ Transfer of polarization from the electron to the nuclear spin system under irradiation of the electronic resonance

$$P_n(\%) = \varepsilon P_n^{\text{thermal}} = \varepsilon \tanh\left(\frac{\gamma \hbar H_0}{2K_B T}\right) \propto \frac{\varepsilon}{T}$$

NON EQUILIBRIUM HYPERPOLARIZED STATE

- ✘ In Metals and solutions
Overhauser Effect
- ✘ In solids doped with radicals
Solid State Effect (SE)

SE: non interacting electrons
TM: interacting electrons

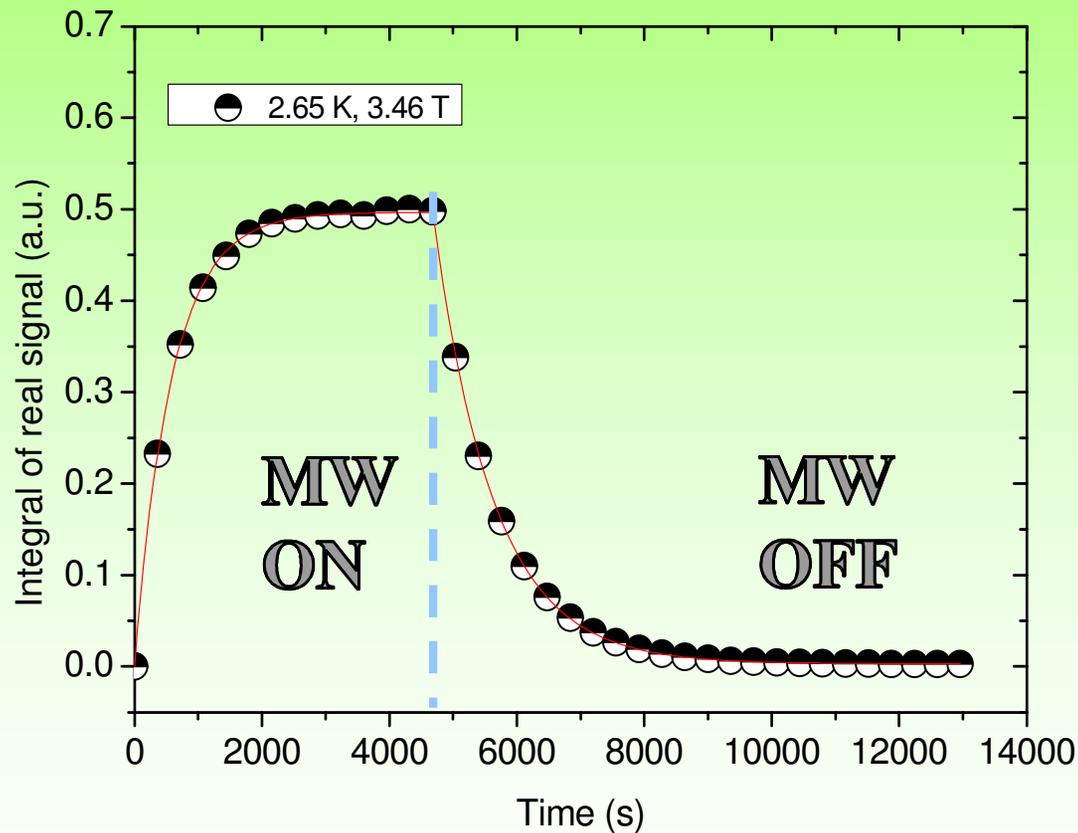

Carver, T. R.; Slichter, C. P. (1953). "Polarization of Nuclear Spins in Metals". *Physical Review* **92** (1): 212–213.

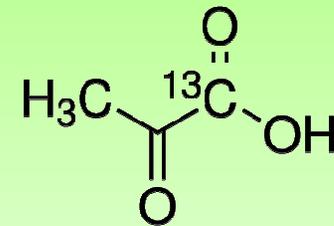

Polarization of Pyruvic acid at 3.46 T

MW source (15mW) about **96.92 GHz**
Pyruvic acid +trityl radical 15mM

¹³C Pyruvic Acid

- **Endogenous molecule**, important for the study of tumoral activity.
- NMR signal increased by a factor 100000

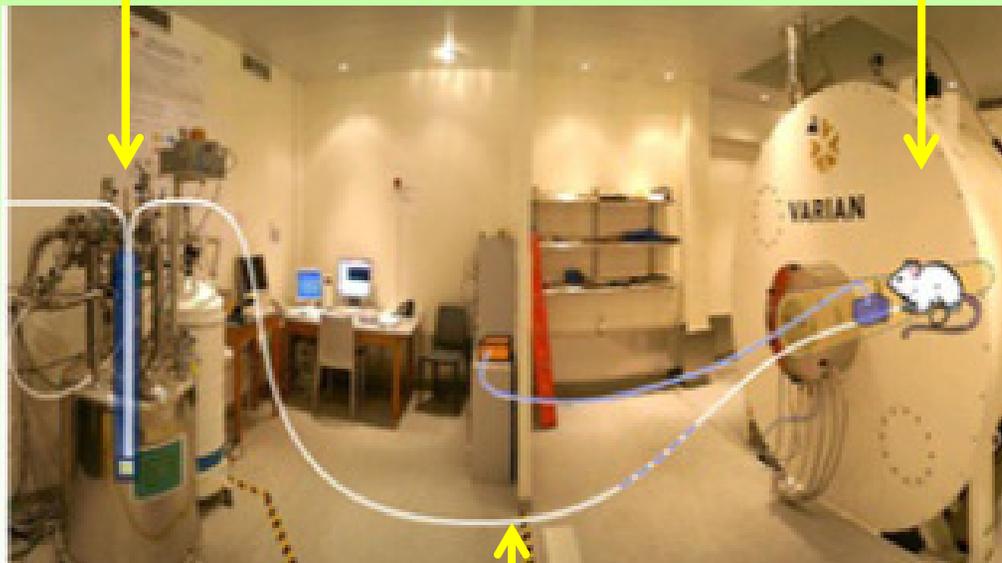

DNP for metabolic imaging

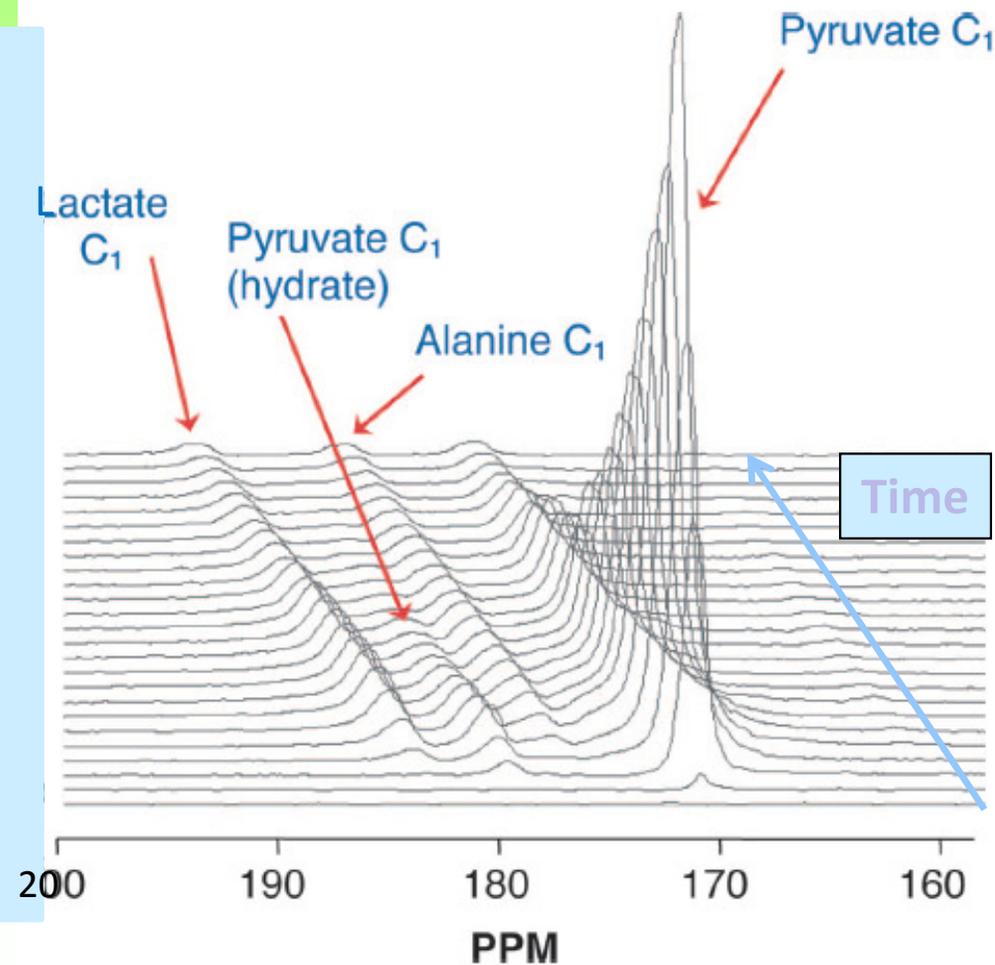

- Solutions of ^{13}C labelled metabolites and paramagnetic radicals (about 10 mM)
- Thermal mixing (TM) at low temperature (1.2 K) and high magnetic fields (3.35T)

Polarization
and dissolution

Injection
and MRI

Transfer line for the sample

Magneto - therapy

Start-up clarifying requests

- Biological effects of ELF (*Extremely Low Frequency*) magnetic fields
- Mechanisms of interaction
- Definition of experimental protocol on cells

MAGNETOTERAPIA PORTATILE "FLEXA" Asalaser

Vicenza

CARATTERISTICHE TECNICHE

2 Canali con 2 uscite per applicatori

Frequenza variabile 0,5 - 50 Hz

Intensità del Campo Magnetico 0 - 1,6 mT

Durata trattamenti 0-99 minuti oppure continua

Programmi preimpostati per patologia

Possibilità di memorizzare trattamenti

APPLICATORE

Solenoide Portatile

30 cm diametro

22 cm di altezza

6,5 Kg di peso

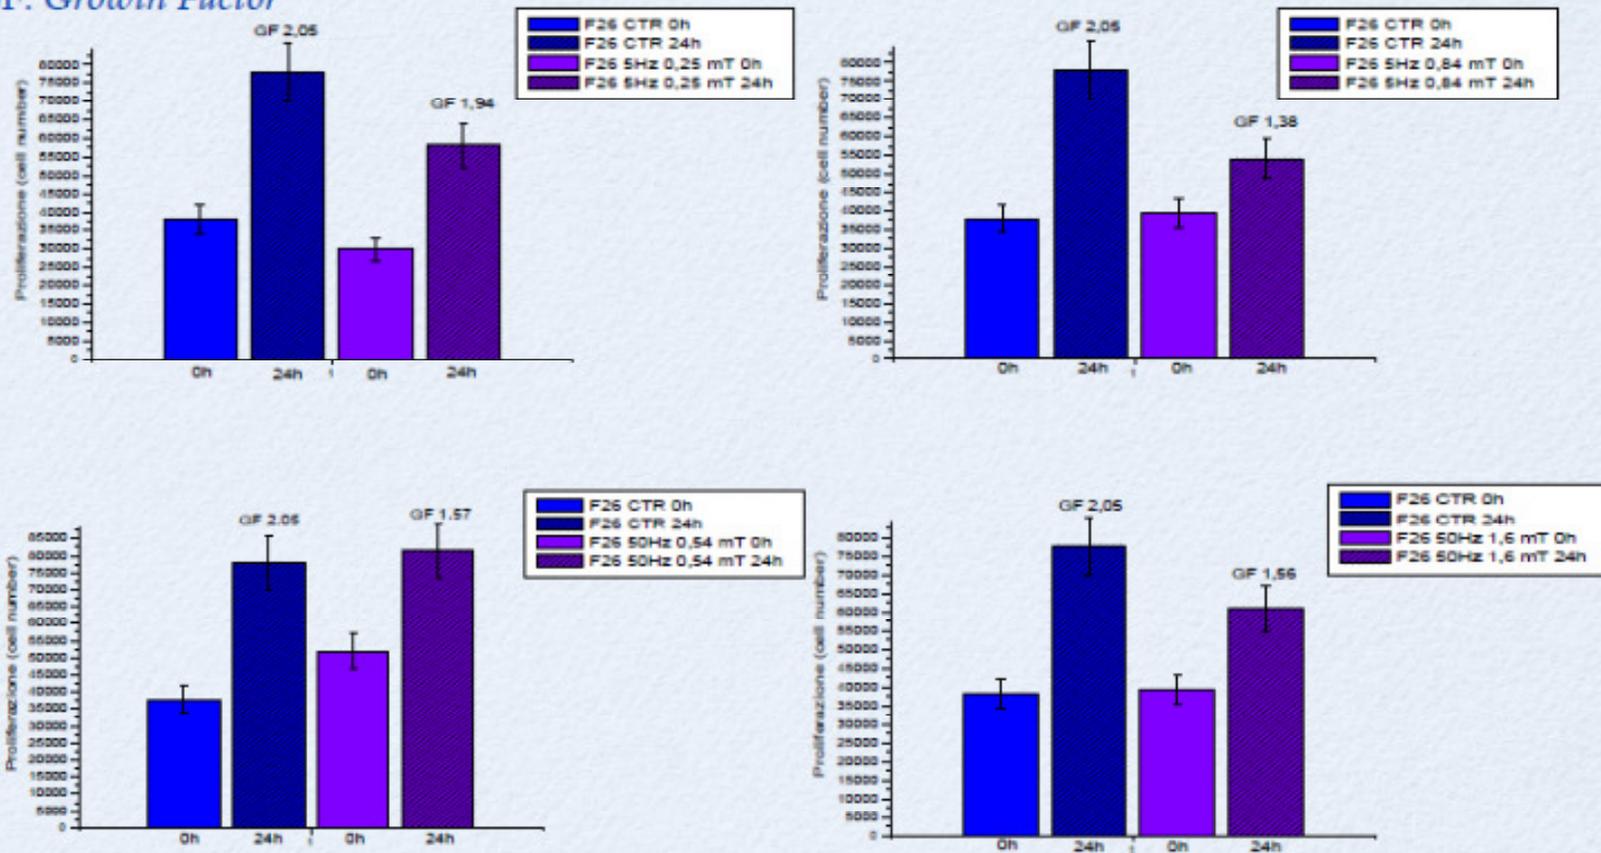

A similar system actually
used by Prof. Benazzo,
Policlinico PV

Secondo Trattamento

PROLIFERAZIONE CELLULARE SULLA LINEA F26

GF: Growth Factor

EFFETTI PIU' MARCATI PER $\nu=5$ Hz $H=0,84$ mT e $\nu=50$ Hz $H=0,54$ mT

- Effetto sulla **proliferazione cellulare** (fibroblasti)

The end

Any questions ??
